

Secure(it)TM

NETWORK SECURITY INFRASTRUCTURE SOLUTIONS

Secure(it)TM Overview

In 2006, CSC launched the Secure(it)TM program, focused primarily on providing new and innovative solutions for secure network deployments and C4ISR facilities. Secure(it) is closely aligned with the Department of Defense's *Defense-In-Depth* strategy, with an increased focus on network security and Information Assurance across both the commercial and government IT communities. Secure(it) provides a layered approach to network security, which:

- Enables comprehensive yet cost-effective protection against the growing threats to sensitive information and critical infrastructures
- Reduces the cost and complexity of deployment for C4ISR networks and SCIF facilities

The addition of these new manufacturers significantly enhances the Secure(it) program and the breadth of products and solutions that CSC can provide in support of our customers' projects. As a result, Secure(it) will now be able to assist customers with the following projects and applications:

- Red Switch/Classified Voice Network Installations
- Red/Black Equipment Storage
- "SCIF-in-a-Box" and IPS deployments
- SIPRNET and JWICS deployments
- Storage for Type I encryption, classified hard-drives, laptops, etc.
- Contingency Communications

Making SIPRRNET and JWICS Deployments EASY!

With the increased integration and synergy between physical and network security, Secure(it) expanded to include network infrastructure and physical security products and solutions. To help customers implement a cost-effective and balanced approach to network security, CSC has developed the Secure(it) Layers of Protection — balancing the sensitivity or criticality of the information or network being protected with the risk and impact of any potential loss or compromise. From protecting Local Area Networks to C4ISR facilities, from personally identifiable information to critical infrastructures, Secure(it) helps customers design and deploy cost-effective solutions for their network security needs.
