

# Secure (it)

NETWORK SECURITY INFRASTRUCTURE SOLUTIONS

## Introducing Secure(it)

### Information is Power

Over the last decade, information systems have truly transformed the world we live in – and have become a critical asset for commercial, government, and military end-users. With dramatic advances in networking technology, an ever increasing amount of information is being stored and shared across both public and private networks.

### Network Security is Paramount

With the amount of information now available, network security and information assurance have become paramount concerns across the IT community. As a result, there has been a dramatic increase in the deployment of high assurance networks and secure facilities, or SCIFs, throughout the military, federal and state government agencies, and commercial industry.

### Secure(it) – Network Security Infrastructure Solutions

In November 2006, CSC launched Secure(it) to provide a comprehensive solution set focused on (1) reducing the cost and complexity of secure network deployments, and (2) enhancing the security and ability to defend high assurance networks and facilities.
