**FOR IMMEDIATE RELEASE**

**Communications Supply Corporation (CSC) and General Dynamics C4 Systems  
Join Forces Under CSC's Secure(it)<sup>TM</sup> Program**

**March 26, 2008, Clarksburg, MD-** CSC is now an authorized reseller of the NSA certified, Sectéra® vIPer<sup>TM</sup> Universal Secure Phone through the Secure(it)<sup>TM</sup> program. Launched in 2006, the CSC Secure(it) program provides innovative network infrastructure and physical security products for secure network deployments and military construction projects, such as those funded by the Base Re-alignment and Closure (BRAC) program. Made by General Dynamics C4 Systems, the vIPer Phone is the only voice over Internet Protocol (VoIP) phone with integrated security certified to protect information classified at Top Secret and below.

The Sectéra® vIPer<sup>TM</sup> Phone enables non-secure and secure, end-to-end VoIP and Public Switched Telephone Network (PSTN) communication over commercial networks, which eliminates the need for multiple desktop phones. Using Secure Communications Interoperability Protocol (SCIP) signaling and commercial open standards, the vIPer Phone is certified to protect information classified Top Secret and below and Sensitive but Unclassified (SBU). The vIPer Phone also supports multiple key-sets for U.S. Government sponsored interoperability that includes NATO and coalition partners.

Secure voice and data networks are being deployed across the Department of Defense, Department of Justice, Department of Homeland Security and the Intelligence community. A majority of the buildings being constructed as part of the BRAC initiative will include secure networks and SCIF work centers, as well as an increased focus on network security. By combining physical and network security products, like the Sectéra® vIPer<sup>TM</sup> Phone, Secure(it) provides a truly cohesive and layered approach which:

- 1) Enables comprehensive yet cost-effective protection against growing threats to sensitive information and critical infrastructures, and
- 2) Reduces the cost and complexity of deployment for C4ISR networks and the construction of SCIF facilities.

For more information on the Sectéra® vIPer™ Universal Secure Phone, please visit [www.gocsc.com](http://www.gocsc.com) or call 301-353-1150.

**About Communications Supply Corporation:**

*CSC, a wholly-owned subsidiary of WESCO International (NYSE: WCC) was founded in 1972. A leading nationwide distributor of low voltage network infrastructure solutions, physical security and industrial wire and cable products, CSC distributes a full range of products to support advanced connectivity for voice and data communications, access control, security surveillance, building automation, residential and commercial audio, video and broadcast distribution, life safety systems, electrical construction and manufacturing for commercial, residential and government customers.*
